Explanations:

1. U – the presented expanded uncertainty is calculated by multiplying the standart uncertainty by the coverage factor $k=2$, which when the normal distribution applies provides a level of confidence of 95 %.
2. Test results related only to the particular samples tested.
3. N -not accredited method.
4. The research protocol must be used as a single document, its division or partial use is prohibited.
5. If the Laboratory is not responsible for the sampling, i.e. the sample was taken and delivered by the customer, the Laboratory's result shall be applied to the sample as it was received.
6. Handing over of the test report [E]-by e-mail.

NPHSL is not responsible for the accuracy or correctness of the information provided by the customer (customer name, address, contact information, including details regarding the sample name, sample amount, manufacturer or owner, place of sampling /collection site, sampling /collection circumstances, labeling, and other identifying or descriptive characteristics).
